### Existential and universal definitions in number theory

Let  $\mathcal{L}$  always be the first-order language of rings. Let K be a field. Which subrings of K are (existentially, universally)  $\mathcal{L}_K$ -definable in K?

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

# Existential and universal definitions in number theory

Let  $\mathcal{L}$  always be the first-order language of rings. Let K be a field. Which subrings of K are (existentially, universally)  $\mathcal{L}_{K}$ -definable in K?

Theorem 1.1 (J. Robinson, 1949)

 $\mathbb{Z}$  has a first-order  $\mathcal{L}$ -definition in  $\mathbb{Q}$ .

It then follows from the undecidability of  $Th(\mathbb{Z})$  that the first-order theory of  $\mathbb{Q}$  is undecidable.

# Existential and universal definitions in number theory

Let  $\mathcal{L}$  always be the first-order language of rings. Let K be a field. Which subrings of K are (existentially, universally)  $\mathcal{L}_{K}$ -definable in K?

Theorem 1.1 (J. Robinson, 1949)

 $\mathbb Z$  has a first-order  $\mathcal L\text{-}definition$  in  $\mathbb Q.$ 

It then follows from the undecidability of  $Th(\mathbb{Z})$  that the first-order theory of  $\mathbb{Q}$  is undecidable.

Theorem 1.2 (Poonen, 2009)

 $\mathbb{Z}$  has an  $\forall \exists \mathcal{L}$ -definition in  $\mathbb{Q}$ .

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ ▲ 三 ● ● ●

# Existential and universal definitions in number theory

#### Question 1.3

Does  $\mathbb{Z}$  have an existential  $\mathcal{L}$ -definition in  $\mathbb{Q}$ ?

If the answer were yes, it would follow from the undecidability of  $Th_{\exists}(\mathbb{Z})$  that the existential first-order theory of  $\mathbb{Q}$  is also undecidable.

▲ロ ▶ ▲周 ▶ ▲ 国 ▶ ▲ 国 ▶ ● の Q @

# Existential and universal definitions in number theory

#### Question 1.3

Does  $\mathbb{Z}$  have an existential  $\mathcal{L}$ -definition in  $\mathbb{Q}$ ?

If the answer were yes, it would follow from the undecidability of  $Th_{\exists}(\mathbb{Z})$  that the existential first-order theory of  $\mathbb{Q}$  is also undecidable.

Theorem 1.4 (Koenigsmann, 2010)

 $\mathbb Z$  has a universal  $\mathcal L\text{-}definition$  in  $\mathbb Q.$ 

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

# Existential and universal definitions in number theory

#### Question 1.3

Does  $\mathbb{Z}$  have an existential  $\mathcal{L}$ -definition in  $\mathbb{Q}$ ?

If the answer were yes, it would follow from the undecidability of  $Th_{\exists}(\mathbb{Z})$  that the existential first-order theory of  $\mathbb{Q}$  is also undecidable.

Theorem 1.4 (Koenigsmann, 2010)

 $\mathbb Z$  has a universal  $\mathcal L\text{-}definition$  in  $\mathbb Q.$ 

#### Theorem 1.5 (Park, 2012)

Let K be a number field. The ring of integers  $\mathcal{O}_K$  has a universal  $\Lambda$ -definition in K.

### Outline

Plan for the rest of the talk:

- Explain how (properties of) quaternion algebras over global and local fields play a role in obtaining these results.
- Mention some existentially definable "building blocks" from which we will build our definition.
- Give a proof of Koenigsmann's Theorem (universal definability of Z in Q).

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬる

### The ramification set

Denote by  $\mathbb{P}$  the set of prime numbers and set  $\mathbb{P}' = \mathbb{P} \cup \{\infty\}$ . Define  $\mathbb{Q}_{\infty} = \mathbb{R}$ . For  $a, b \in \mathbb{Q}^{\times}$ , define the *ramification set* of the quaternion algebra  $(a, b)_{\mathbb{Q}}$  as follows:

 $\Delta(a,b) = \{ p \in \mathbb{P}' \mid (a,b)_{\mathbb{Q}_p} \text{ is non-split} \}.$ 

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

### The ramification set

Denote by  $\mathbb{P}$  the set of prime numbers and set  $\mathbb{P}' = \mathbb{P} \cup \{\infty\}$ . Define  $\mathbb{Q}_{\infty} = \mathbb{R}$ . For  $a, b \in \mathbb{Q}^{\times}$ , define the *ramification set* of the quaternion algebra  $(a, b)_{\mathbb{Q}}$  as follows:

$$\Delta(a,b)=\{p\in \mathbb{P}'\mid (a,b)_{\mathbb{Q}_p} ext{ is non-split}\}.$$

Recall:  $(a, b)_{\mathbb{Q}} \cong (ac^2, bd^2)_{\mathbb{Q}}$  for  $a, b, c, d \in \mathbb{Q}^{\times}$ , whence  $\Delta(a, b) = \Delta(ac^2, bd^2)$ .

### The ramification set

#### Proposition 2.1 (Computation of the ramification set)

Let  $a, b \in \mathbb{Z} \setminus \{0\}$  be square-free.

- $\infty \in \Delta(a, b)$  if and only if a < 0 and b < 0.
- ② For  $p \in \mathbb{P} \setminus \{2\}$  we have  $p \in \Delta(a, b)$  if and only if one of the following holds
  - $v_p(a) = 1$ ,  $v_p(b) = 0$  and b is not a square mod p
  - $v_p(a) = 0$ ,  $v_p(b) = 1$  and a is not a square mod p
  - $v_p(a) = 1 = v_p(b)$  and -ab is not a square mod p
- **(***Hilbert Reciprocity*)  $|\Delta(a, b)|$  *is an even natural number.*

Note: this allows us to fully compute the ramification set of a given quaternion algebra over  $\mathbb{Q}$  (we can scale any  $a, b \in \mathbb{Q}^{\times}$  be a square to obtain a square-free element of  $\mathbb{Z} \setminus \{0\}$ ).

Ramification sets & existential predicates

Defining  $\mathbb{Z}$  in  $\mathbb{Q}$ 00000

▲ロ ▶ ▲周 ▶ ▲ 国 ▶ ▲ 国 ▶ ● の Q @

### The ramification set

#### Lemma 2.2

Let p, q be positive prime numbers such that  $q \equiv 5 \mod 8$  and q is not a square modulo p. We have:

$$\{p,\infty\} = \begin{cases} \Delta(-1,-2) & \text{if } p \equiv 2\\ \Delta(-1,-2p) & \text{if } p \equiv -1 \mod 4\\ \Delta(-p,-2) & \text{if } p \equiv 5 \mod 8\\ \Delta(-q,-2p) & \text{if } p \equiv 1 \mod 8 \end{cases}$$

Proof: Exercise.

Defining  $\mathbb Z$  in  $\mathbb Q$  00000

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬる

### Existentially definable building blocks

For  $a, b \in \mathbb{Q}^{\times}$ , define

$$T(a,b) = igcap_{p \in \Delta(a,b)} \mathbb{Z}_{(p)}$$

where (for technical reasons) we set  $\mathbb{Z}_{(\infty)} = ]-4, 4[.$ 

Ramification sets & existential predicates

Defining  $\mathbb{Z}$  in  $\mathbb{Q}$ 00000

### Existentially definable building blocks

For  $a, b \in \mathbb{Q}^{\times}$ , define

$$T(a,b) = \bigcap_{p \in \Delta(a,b)} \mathbb{Z}_{(p)}$$

where (for technical reasons) we set  $\mathbb{Z}_{(\infty)} = ]-4, 4[.$ 

#### Proposition 2.3 (Poonen, Koenigsmann)

There exists an existential  $\mathcal{L}$ -formula  $\psi$  in 3 free variables such that for all  $a, b \in \mathbb{Q}^{\times}$  we have

$$T(a,b) = \{x \in \mathbb{Q} \mid \mathbb{Q} \models \psi(x,a,b)\}$$

**Proof:** tomorrow.

# Existentially definable building blocks

#### Corollary 2.4

For every  $p \in \mathbb{P}$  the ring

$$\mathbb{Z}_{(p)} = \{x \in \mathbb{Q} \mid v_p(x) \ge 0\}$$

has an existential definition in  $\mathbb{Q}$ .

**Proof:** Exercise. Already implicit in Robinson's work.

Defining  $\mathbb Z$  in  $\mathbb Q$  00000

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

### Existentially definable building blocks

For  $c \in \mathbb{Q}^{\times}$ , define

$$\mathsf{Odd}(c) = \{p \in \mathbb{P} \mid v_p(c) \text{ is odd}\}$$

and for  $a, b, c \in \mathbb{Q}^{ imes}$ , set

$$J^{c}(a,b) = \bigcap_{p \in \Delta(a,b) \cap \operatorname{Odd}(c)} p\mathbb{Z}_{(p)}.$$

Defining  $\mathbb Z$  in  $\mathbb Q$  00000

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

### Existentially definable building blocks

For  $c \in \mathbb{Q}^{\times}$ , define

$$\mathsf{Odd}(c) = \{p \in \mathbb{P} \mid v_p(c) \text{ is odd}\}$$

and for  $a, b, c \in \mathbb{Q}^{ imes}$ , set

$$J^{c}(a,b) = \bigcap_{p \in \Delta(a,b) \cap \mathsf{Odd}(c)} p\mathbb{Z}_{(p)}.$$

Lemma 2.5

We have

$$J^c(a,b) = T(a,b) \cdot \left( (c \cdot (\Box K)) \cap (1 - (\Box K) \cdot T(a,b)^{ imes}) 
ight).$$

Proof: Exercise.

▲ロト ▲周ト ▲ヨト ▲ヨト ヨー のくで

#### Corollary 2.6 (Koenigsmann)

There exists an existential *L*-formula  $\psi$  in 4 free variables such that for all  $a, b, c \in \mathbb{Q}^{\times}$  we have

$$J^{c}(a,b) = \{x \in K \mid K \models \psi(x,a,b,c)\}$$

Outlook

Tomorrow, I will talk about:

• the proof of Proposition 2.3, i.e. the existential definability of  $\bigcap_{p \in \Delta(a,b)} \mathbb{Z}_{(p)}$ .

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

Tomorrow, I will talk about:

- the proof of Proposition 2.3, i.e. the existential definability of  $\bigcap_{p \in \Delta(a,b)} \mathbb{Z}_{(p)}$ .
- What was essentially used in this proof about existential definability and ramification sets? How can we generalise, e.g. to number fields (= finite extensions of Q)?
